# 1. About the module

Reviver Rental Module lets you rent all types of products: from a movie to a car. You can even set rental packages like skies with additional protective gear to choose. Users can select date, fill their name and other additional information. All products for rent will be listed in one page.

Prestashop version compatibility: 1.5.1.0 - 1.6.1.6

## Features

- Allows to rent all types of products (you can even use products that already exist in your shop).
- Rental page integration into CMS page area.
- Unlimited rental templates for products.
- Ability to add additional products / services and rent them as a package/combo.
- Ability to create your own custom fields for rental information input.
- Create grids based pricing of rental periods (price/discount dependency on days count).
- Allows users to see current price for the rental period in real time (live update of price).
- Included date picker for date selection.
- Allows multiple orders of same product.
- Ability to change the order of fields, additional products / services within product template
- Allows administrators to set discounts based on rental period (can be also enabled for additional products / services).
- Setting to include/exclude first day of rental when counting rent duration.
- Rental orders are saved as a regular order and are accessible via Orders menu.

- Custom email template with all rental information for administrators
- Module uses Bootstrap framework(responsive) for Front Office output, so you can easily edit it to match the style of your shop

## 2. Module installation

There are a few ways to install our Rental Module. First of all please check your current Prestashop version before continuing with installation (to check your current version login to your Prestashop administration panel and look at the bottom left of the page or top left for newer versions).

### First method

Login to your Prestashop administration area and then go to modules page. On the top right corner click “Add new module” and select the .zip file that you have downloaded, then click “Upload”. Now find “Reviver Rental Module” in the modules list and click “Install” button, if you get a confirmation dialog click “Proceed with the installation”.

### Second method

Extract module’s .zip file and upload to your Prestashop “modules” folder on your FTP server. Login to your Prestashop administration area and then go to modules. Now find “Reviver Rental Module” in the modules list and click “Install” button, if you get a confirmation dialog click “Proceed with the installation”.

## Regenerating thumbnails

If you intend to use products that were added to your shop before you installed the Rental Module you need to regenerate product thumbnails, otherwise (if you will add new products) you can skip this step. Go to “Preferences” > “Images” scroll down to bottom of the page. Here you can change the dimensions of “reviver\_rental” image type to fit your needs. Then select “Products” in “Select an image” field and select “reviver\_rental” in “Select a format”. Now click “Regenerate thumbnails” button. Process duration depends on product count. If server time outs during the regeneration process, repeat all steps except set “Erase previous images” to “No”.

## 3. Module usage

After successful module installation, go to modules list and find “Reviver Rental Module” in the modules list and click “Configure” button.

### 3.1. Configuration page

**Rental module**  
Reviver.It

**Currently assigned products to the rent list**

ID	Product name	Template name	Position	Actions
1	Test product	Skies ECO	1	 

Note: Sorting settings can be changed at the bottom of this page.

**Rental templates**

Create new rental template

ID	Template name	Total fields	Total products	Actions
1	Skies ECO	4	2	 

Note: Rental templates may have the same name.

**Fields**

Create new template field

ID	Field name	Title	Type	Actions
1	datefrom	Date from	date	 
2	dateto	Date to	date	 
3	name	Name	input	 
4	shoe	Shoe size	select	 

Note: All created fields could be used in multiple templates.

**Additional products / services**

Create new template product / service

ID	Product / service name	Title	Price	Actions
1	bag	Bag for skies	4.80	 
2	helmet	Helmet	4.00	 

Note: All created products / services could be used in multiple templates.

**Rental options**

CMS page for rental list: Rental page

Email recipients (separate with comma): support@reviver.it

Order by: Order by product name ascending

Compatibility for columns: No

Force add tax: No

Update settings

Here is an example of possible module usage. Keep in mind that first section “Currently assigned products to the rent list” only shows a list of assigned products with their order positions. To assign template to a product see “Assign template to products” section (page 8). At the bottom of the page you can change ordering settings, administrator e-mail address (separate by comma if you need to use multiple e-mails) and CMS page where rental products will appear. When client places an order, custom e-mail will be sent to the e-mail/e-mails you’ve set in module settings, this email will contain all rental information (any field that you add to rental page will be included in this e-mail e.g. dates, names, sizes etc.). Use “Compatibility for columns” setting if your theme has right and left columns, this setting will alter module template and make buttons bigger. Depending on your shop configuration you may need to add taxes to prices used in the module, this feature is disabled by default.

## 3.2. Creating rental template fields

### Rental module

Reviver.It

**Actions with fields**

Type:

Name:

Title:

Placeholder:

Value:

Note: In order for rental prices and durations to work properly you must at least create 2 date fields. The first one will automatically be “from date” and second will be “to date”.

Click “Create new template field”, select input type, enter field name (we recommend using only Latin letters and numbers, no spaces), title (will be visible to users), placeholder (never browsers can show pre-entered text in input fields) and default value. Some input fields like “select”, have additional settings after you save them.

### 3.3. Creating additional products / services

#### Rental module

Reviver.It

**Actions with additional products / services**

Name:

helmet

Title:

Helmet

Description:

Helmet for your protection.

Old price:

Price:

4.00

Image:

Delete

Create new

Back

Save

Note: To show product price as discount enter old price field, otherwise leave it empty.

Click “Create new template field”, enter name (we recommend using only Latin letters and numbers, no spaces), title (will be visible to users), description (will be displayed to users next to the field), price fields (if you want product to show discounted price, enter both fields, otherwise fill only “Price” field). Use dot for prices and not the comma (4.20 is good, but 4,20 is not). You can upload image after product / service is saved.

### 3.4. Creating rental templates

#### Rental module

Reviver.lt

**Actions with rental templates**

Name:

Create new

Back

Save

Include first day to rent:

Discount method:

**Template fields**

Field:

Position:

Add field

ID	Field	Position	Actions
1	datefrom	1	 
2	dateto	2	 
3	name	3	 
4	shoe	4	 

**Template additional products / services**

Product / service:

Position:

Add product / service

ID	Field	Position	Actions
1	bag	1	 
2	helmet	2	 

**Order days coefficients**

Days from:

Days to:

Coefficient:

Add coefficient

Days from	Days to	Coefficient	Actions
1	2	1.00	 
3	6	0.90	 
7	60	0.75	 

Note: Before creating templates, make sure you already created your fields and additional products / services you want to create (you may add them later too, but you have to open template editing page again). See “Creating rental fields” (page 5) and “Creating additional products / services” (page 6).

Click “Create new rental template”, enter the template’s name (it will only be shown to administrators), for example “Skies ECO” and click “Save”, you will be redirected to template editing page.

- “Include first day to rent” - depending of your product type you can choose to include first day of rental to be accounted for (e.g. when this option is enabled product that is taken on January 1st and returned on January 2nd will have a cost of 2 days, otherwise it will have a cost of 1 day).
- “Discount method” – if you choose “Global product”, discount will be applied from the product settings (specific price) to product and all additional products / services. If you select “Individual”, discount will be applied from the product settings (specific price) only to product, while all additional products / services will have their own discounts (if set). See “Creating additional products / services” (page 6).

Then you can assign already created fields and enter their position. Same mechanic works for additional products / services.

“Order days coefficients” – here you can create grids based pricing of rental periods. In the date fields you must enter rental day count (not actual date). You can’t use same day for ending and the beginning of another range (for example 1-2 and 3-4 is good, but 1-2 and 2-3 is not) Use dots for decimals when entering price coefficient. See picture above.

After you have finished setting up your template, hit “Save” on the top of the page (near template’s name field). Your template now will be shown as a selection on product editing page inside “Reviver Rental Module” tab.

### 3.5. Assigning template to products

The screenshot displays the 'Reviver Rental Module' configuration window. On the left is a vertical sidebar with a list of tabs: Information, Prices, SEO, Associations, Shipping, Combinations, Quantities, Images, Features, Customization, Attachments, Suppliers, and 'Reviver Rental Module' (which is highlighted in blue). The main content area is titled 'RENTAL SETTINGS'. It features a section labeled 'Assigned template' with a dropdown menu currently showing 'Skies ECO'. Below this is a light blue informational box with a question mark icon and the text: 'You can assign only one template per product. Click here in order to edit or create new templates.' At the bottom of the settings area, there are three buttons: 'Cancel' (with a close icon), 'Save and stay' (with a floppy disk icon), and 'Save' (with a floppy disk icon).

After you finished setting up templates you can now assign them to your products. Go to “Catalog” > “Products”, then click on “Reviver Rental Module” tab. Now select your template and click “Save” or “Save and stay”. If you want to edit or create new templates, go back to module configuration window. After saving, your product will be listed in rental products list page. To set your rental products list **page you** must first create CMS page (“Preferences” > “CMS”) and then set this page in module configuration, read more about it in “Configuration page” section (page 4).

## 4. Support

Thank you for purchasing our module.

If you need any help please visit our profile on Prestashop add-ons page. Found a bug? Have any suggestions? You can write directly to our e-mail address at [support@reviver.lt](mailto:support@reviver.lt). Please include your username, which you used during purchase, in e-mail.

### 4.1. Appearance

For best results we recommend using landscape format images for main products. We provide you with some barebones of style. You can edit `reviver_rental/style.css` file and the main template file `reviver_rental/views/templates/front/reviver_rental.tpl` to meet your needs. We can't provide code for every occasion, since every project is different. If you need any custom works to be done, please contact us by e-mail at [support@reviver.lt](mailto:support@reviver.lt).

### 4.2. Editing admin e-mail template

You can easily edit e-mail template just like any other e-mail template in Prestashop. Go to "Localization" > "Translations", then under "Type of translation" select "Email templates translations", select your language and theme and click "Modify". Look for "reviver\_rental" on the list and expand it, then click on "new\_order". Additional rental information (from created fields) is displayed within `{items}` tag.

## 5. Changelog

- Version 1.1
  - ✓ Added compatibility setting for themes with side columns.
  - ✓ Added tax control ability in module settings.
  - ✓ Fixed bug in JS when adding reduced price to total sum.
  - ✓ Fixed bug when adding reduced price to cart was calculated wrongly.
- Version 1.05
  - ✓ Added additional image type for easier image size administration.
  - ✓ Fixed bug in JS when currency sign is on the right side of the price.
  - ✓ Fixed few minor text related issues.
- Version 1.0
  - ✓ Initial release.
